

Shopify Data Science

Apratim Mishra

3. We're always looking to see where passion and engagement shows itself in all aspects of your life. Please answer the questions outlined in the application to tell us more about yourself!

- If you were to open a Shopify store, what would you sell and why (or tell us about your store if you have one!) (200-word limit)
- Any last thoughts? (ie. proud accomplishments, cool ideas, a joke, etc.) (200-word limit)

Ans 3) Shopify is an online ecommerce website where retailers can reach out to a large number of customers easily.

If I were to sell something, I would probably get into the marketplace for traditional clothes. I believe it would be traditional garment that I can sell to people around the world.

Other than that, I am also interested in chess and soccer, so I could also provide specific clothes based on these themes.

Proud accomplishment -> I can bench 3 plates recently

Cool Idea -> I am very interested to work in product and insights. I can also work in recommendations.

Text based recommendations are the technology now, but something like having the person's picture (that the person uploaded) try out the listed clothes could be game changing as a technology.
